

The basics of ConvNets

10/10 points (100%)

Quiz, 10 questions

✓ Congratulations! You passed![Next Item](#)1 / 1
points

1.

What do you think applying this filter to a grayscale image will do?

$$\begin{bmatrix} 0 & 1 & -1 & 0 \\ 1 & 3 & -3 & -1 \\ 1 & 3 & -3 & -1 \\ 0 & 1 & -1 & 0 \end{bmatrix}$$

points

2.

Suppose your input is a 300 by 300 color (RGB) image, and you are not using a convolutional network. If the first hidden layer has 100 neurons, each one fully connected to the input, how many parameters does this hidden layer have (including the bias parameters)?

points

3.

Suppose your input is a 300 by 300 color (RGB) image, and you use a convolutional layer with 100 filters that are each 5x5. How many parameters does this hidden layer have (including the bias parameters)?

1 / 1
points

4.

You have an input volume that is $63 \times 63 \times 16$, and convolve it with 32 filters that are each 7×7 , using a stride of 2 and no padding. What is the output volume?

The basics of ConvNets

5.

You have an input volume that is $15 \times 15 \times 8$, and pad it using "pad=2." What is the dimension of the resulting volume (after padding)?

1 / 1
points

6.

You have an input volume that is $63 \times 63 \times 16$, and convolve it with 32 filters that are each 7×7 , and stride of 1. You want to use a "same" convolution. What is the padding?

1 / 1
points

7.

You have an input volume that is $32 \times 32 \times 16$, and apply max pooling with a stride of 2 and a filter size of 2. What is the output volume?

1 / 1
points

8.

Because pooling layers do not have parameters, they do not affect the backpropagation (derivatives) calculation.

1 / 1
points

9.

In lecture we talked about "parameter sharing" as a benefit of using convolutional networks. Which of the following statements about parameter sharing in ConvNets are true? (Check all that apply.)

Quiz, 10 questions

10.

In lecture we talked about “sparsity of connections” as a benefit of using convolutional layers. What does this mean?
